

**PFF Care Center Network™**

Care. Education. Innovation.

## PFF CARE CENTER NETWORK

The Pulmonary Fibrosis Foundation (PFF) offers the designation PFF Care Center to interstitial lung disease (ILD) programs that provide high-quality care, engage in ILD research, and work to educate the community about pulmonary fibrosis (PF). To earn the designation, a program must have a full range of facilities and a multidisciplinary team that works collaboratively to diagnose and manage the care of people living with PF. Doctors and nurses at each of these centers participate in educational events for patients, caregivers, and the healthcare community in addition to donating their time to regular patient support groups.

The PFF Care Center Network (CCN) currently includes 74 individual centers across the country (see reverse). The Network provides an opportunity for these expert care teams to work together to improve the quality of care for patients, collaborate in research projects to expedite and broaden scientific discoveries, and work with the PF community to increase the awareness and understanding of the disease.

The PFF periodically accepts applications for additional centers. The PFF hopes to increase the number of centers within the CCN as well as provide more opportunities for community care providers to partner with designated Care Centers to share expertise and provide an even more comprehensive and cohesive care experience for patients.

The PFF is proud to partner with these outstanding care teams. We could not accomplish all that we do without their efforts, expertise, and dedication to caring for those living with pulmonary fibrosis. To learn more about the PFF Care Center Network, visit <http://bit.ly/pffccn>.

## PFF CARE CENTER NETWORK

PFF Care Centers broaden our impact by collaborating with the community to:

- Identify patients with PF earlier
- Provide access to specialized care and cutting-edge research
- Enhance awareness and understanding of PF

## PFF CARE CENTER NETWORK GOALS

- **Diagnosis:** Reduce time to accurate diagnosis of PF
- **Quality of Care:** Ensure patients have access to high-quality care within two hours of their homes through the expansion of the CCN and their partners within the community
- **Research:** Facilitate research within the CCN and PFF lead research to enhance our understanding of PF and expedite efficient clinical trials to identify effective therapies
- **Advocacy:** Effectively advocate for the PF community
